The final dissemination conference of Project INTEGRATE, funded through the European Union’s Seventh Framework, takes place as part of ICIC16 on Monday, 23 May 2016. This one-day conference is free to attend for anybody working or interested in in the field of integrated care and related areas and is open to all ICIC16 delegates.

Project INTEGRATE is a consortium of 9 partners from across Europe led by IESE Business School who have worked to gain valuable insights into the leadership, management and delivery of integrated care to support European care systems to respond to the challenges of ageing populations and the rise of people living with long-term chronic conditions.

This final conference will describe the key lessons learned across each phase of research and based on this learning provide managerial and policy recommendations for those tasked with designing and delivering integrated care services. The results and recommendations will be set within an international context and delegates will have the opportunity to discuss with project members and expert advisors what the impact of the research will be and how the lessons and recommendations can be applied at a national, regional and local level.

This conference is FREE TO ATTEND, will also take place at the Palau de Congressos and is open to all ICIC16 Conference Delegates — REGISTER NOW

For more information and to view the full programme visit the conference website www.integratedcarefoundation.org/icic16

1.4 Workshop: Integrating services and education in primary care (545) T1 T2 T4

Led by co-directors Dr. Ian James Walton, General Practitioner & Lisa Hill, Advanced Practitioner Mental Health, Top of the World Training, UK,

Mental Health is key to integrated care and good Primary care takes into account the patients feelings, background and circumstances in every consultation. Primary care is in the ideal position to have an excellent understanding of the patient’s family, circumstance and community. We have yet to meet a patient with mental illness, whose illness could not be explained from the patient’s background and history. Primary care is central to helping patients recover.

Currently primary care is taught a medical and disease orientated model that fails to build on the unique relationship between clinician and patient. As a result primary care has responded to the increase in mental illness contributes to 30-60% of consultations, by massively increasing prescribing of medication, they have little else in their toolkit.

Come to our workshop and learn about the bio-psychosocial model that is key to integrated medicine, looking after mind and body. We will show how we teach a successful integrated approach validated by the King’s Fund, focusing on the needs of each individual. Expanding the clinician’s toolkit increases the
