

Designing and Implementing Integrated Care

An Accelerated Learning Course for Leaders in Integrated Care
Programs in Ireland

Royal Valentia Hotel, Valentia Island, Co. Kerry
Monday 7 October – Friday 11 October 2019

University College Dublin
Ireland's Global University

International Foundation
for Integrated Care
IFC Ireland

Course Description

This accelerated learning course in association with the Health Service Executive (HSE) responds to demand from the health and care sector to help build capacity and skills in the effective adoption of integrated care programs in practice.

This course is designed as a residential program to primarily support any team involved in the provision of integrated care, to build their knowledge about the design and implementation of integrated care programs to support specific project developments in their own context and the content will be of relevance to those just starting on a new initiative and those who are aiming to improve an existing integrated care program.

The course is designed for cohorts of between 3-5 delegates to use the accelerated learning course to develop an implementation plan for their own integrated care projects. This may be an idea for a new project, or it could be to review and support an existing project or program. Up to 20 participants will be selected following an application process.

Before the residential program begins, cohort participants will work together to select or devise an integrated care project that they would like to develop during the one-week course.

Details to be provided:

- A title for the project
- Outline the population group targeted for integrated care, including details of the local context for implementation
- Set out a 'problem statement' that creates the need and rationale for moving to an integrated approach to care
- Articulate the key outcomes being sought (e.g. for people, for the system)
- Detail the overarching aims and objectives of the program

The groups will submit their project outlines to the course directors in early September and develop short presentations to share with other delegates on the first morning of the program.

To support an understanding of the current strengths and weaknesses of current care systems to achieve the aims and objectives of local initiatives, the groups will be sent an online survey to examine the strength or presence of key evidence-based building blocks in the development of integrated care systems. The purpose of using the tool is to enable the participants to self-assess their readiness and the project readiness they are undertaking. This will be supported by a review call with a member of our faculty in preparation for the work to be undertaken during the course of the Accelerated Learning Program.

The results and reflections of the survey and pre course work will be used to support participants to undertake a situational analysis during the course. This analysis helps to provide an understanding of the issues to be resolved in local contexts for building new skills competencies to deliver integrated care and encourages a look at issues to prioritise.

Each project will also be facilitated with a follow up call with their assigned faculty member to review the course and how it has assisted in furthering and refining their program of work and integrated care projects.

“ Overall an excellent experience that I am grateful to have been a part of. Thank you to everyone involved for your generosity in the time and wisdom shared with us. ”

PHN participant, International Summer School on Integrated Care, March 2018

Syllabus

The course will include presentations, cases and discussions on the following topics:

- The building blocks of integrated care
- An implementation model for integrated care
- Involving patients, caregivers and communities
- Collaborating across professional and sectoral boundaries
- Educating and training a competent workforce
- Governance and policy design to support whole system transformation
- Financing integrated care and creating incentives
- Evaluating and assessing integrated care
- Leading and managing change: designing integrated care solutions and implementing change
- Case Study Work – diagnosis, analysis and design, and strategic planning
- Half-day study visit

Faculty

The faculty consists of national and international experts who provide first hand insights into their respective fields, basing their presentations on scientific and professional experiences.

- **Leo Lewis**, Senior Associate and Head of Research and Development, International Foundation for Integrated Care
 - **Dr Anne Hendry**, Senior Associate, International Foundation for Integrated Care and Director of IFIC Scotland
 - **Professor Áine Carroll**, Professor of Healthcare Integration and Improvement UCD/NRH
- Guest speakers will be invited to join the faculty to support the delivery of the syllabus.

“ I recently attended the Accelerated Learning Program in Orange and what a fantastic opportunity it was! The content was in-depth and took my understanding of IC to another level. It was wonderful to meet the leaders in this field, bringing research to clinical practice and service design. I was able to refine my project plan and was left with some clear goals to work on. The opportunity to network with other teams from around the state was an enjoyable bonus. I would highly recommend this intensive week of learning. ”

NSW LHD participant, Accelerated Learning Course, October 2018

Requirements and Fees

This course is designed as a residential program to primarily support Public Health Nurses/Community Intervention Teams and their local partners, to build their knowledge about the design and implementation of integrated care programs to support specific project developments in their own context. However, other applicants will be considered and all course content is relevant across a number of contexts. The course is designed for cohorts of between 3-5 delegates to use the accelerated learning course to develop an implementation plan for their own integrated care projects. This may be an idea for a new project, or it could be to review and support an existing project or program. Up to 20 participants will be selected following an application process.

Individuals: EUR €2250 per delegate

The course fee includes all teaching materials, refreshments, lunches plus dinners where indicated. In addition, the course fees include all travel and catering costs related to the study visit day.

The course fees do not include delegate accommodation, travel to/from the venue, and breakfast and dinners, unless otherwise indicated in the course program.

Places on the course are available by direct application. To make a booking, or to find out more about the program, please contact Karen O'Connell at karenoconnell@integratedcarefoundation.org

Deadline for applications is Friday, 30 August 2019

“ I recently attended the IFIC Summer school in Orange, NSW between 29th Oct – 2nd November. I have to say I thoroughly enjoyed myself and learnt so much. The program was excellent, packed full of some really useful and effective frameworks and tools for working within the integrated care space. Each Presenter was warm, exceptionally knowledgeable and very generous with their time. The program's collegial atmosphere was also very conducive to learning and putting into practice newfound skills and knowledge. I really couldn't recommend the course enough to those working to better integrate care services and systems. ”
